

IN THE ABSTRACT:

Please substitute the following abstract for the abstract starting at page 77, line 2 and ending at line 11.

The present invention provides a method of manufacturing an image display device in which a panel member constituting a panel of an image display device is transferred to a plurality of processing chambers each ~~comprising~~ having a temperature control unit, and subjected to a plurality of processing steps under temperature control. The temperature of the panel member in each of the processing chambers is set to be not more than the set temperature of the panel member in the previous processing chamber by the temperature control unit.
